

RUBBER COVERED ROLLS

crating | sealing | bag-making | wrapping | gluing | abrasive belt | grinding | finishing

CRC has been the leading source for custom-built contact rolls for over 30 years. We not only offer capabilities for an endless variety of grooving configuration, but also an unbeatable combination of quality, price, delivery and technical support.

CONTACT RUBBER CORPORATION

Available elastomers for roll coverings include:

- Silicone
- Neoprene
- Hypalon
- Millable Urethane
- SBR & EPDM
- Cast Polyurethane
- Natural Rubber
- Buna N

SERVICES

- Core & shaft repair
- Complete core fabrication
- Dynamic balancing
- Roll design
- Custom fabrication
- Roll covering recommendation
- Grinding, serrating and balancing equipment

RUBBER COVERED ROLLS

Like many manufacturers, we combine a blend of experience and skill to make quality rubber covered roll products. But it's our special attitude of service, pride, and commitment to our customers that is the real story of Contact Rubber. All of this, and one of the fastest delivery times in the industry! Let us show you what our roll recovery service can do for your roller application.

Roll Recovery

Serrated Sanding Drums, Holddown Rolls, Infeed & Outfeed Wheels, and Rolls

Our custom state-of-the-art serrating equipment has no equal in North America. We are able to groove angled, diamond, spiral, herringbone, or corrugation pattern in our roll recovery process. Our roll covering materials are formulated to be resistant to ozone, heat, and extreme abrasion...and our compounds are tailored to meet exacting specifications. Roll coverings are available in a wide range of hardnesses, from 20 through 100 Duro.

Available Grooving Patterns

Diamond Pattern – Minimizes hydroplaning/better gripping for feed rolls.

Helical Pattern – Proper combinations of groove angle along with land and groove width enhance the grinding or sanding ability of wide coated abrasive belt machines. (45° and 15° shown.)

Plain Face – Plain grind texture or satin smooth finish used for a multitude of purposes.

Serr-X Serration Pattern – provides abrasive belt-cutting action and conformability.

90-Degree Fluted Groove Pattern – For conveyor belt drive. Helps keep the belt clean. Can also be used in scraping unwanted material from substrates.

Chevron Pattern – Good pulling action. Helps keep conveyor belt tracking properly. Smooths out wrinkles in continuous webs.
